1.0 Executive Summary

The Town of Middleborough engaged Weston & Sampson Engineers, Inc. in 2003 to prepare a study of the existing athletic fields and parcels that may potentially be developed for future recreational use; and to develop several conceptual recreation development plans based upon the report analysis and recommendations.

The scope of work consisted of reviewing existing reports and studies; evaluating existing facilities for adequacy of quality and quantity; inspection and evaluation of town and privately owned parcels for suitability for recreational development; the assessment of existing facility maintenance and recommendation of a comprehensive maintenance program for all facilities; and consulting with town officials, sports league officials and other interested parties to gather relevant data; and incorporating relevant demographic and statistical data to complete the work of the report.

Our analysis of existing use and scheduling indicate that field quantities and time provided to most sports during their respective prime season of play is at or nearing full capacity for all sports. Construction of one (1) new Football is recommended now to overcome current overuse of the Battis Field site. We recommend construction of a football practice field to allow for resting some shared use fields.

Touz ?

Our analysis of projected field use and scheduling indicate the need for New field construction is will be required for: 2 baseball 60' diamonds, 3 softball fields, 1 soccer field, and 2 football fields to meet future field demands by 2008.

William ?

A review of the quality of the existing facilities indicates that many sites have ADA / Handicap Accessibility deficiencies; many sites have field, parking or equipment problems requiring corrective action; and that substantial field or facility expansion possibilities exist at several sites. Field Turf quality was found to be variable from facility to facility. A turf industry recommended maintenance plan and facility irrigation improvement program is outlined to keep fields in their best and safest condition.

Several parcels emerge as good candidates for new recreational facility development or expansion. Among these, the former gravel pit area the High School Complex, the town owned parcel on Tispaquin Street, and several private parcels adjacent to the West Side fields. Section 6.2 reviews the possibilities in detail; conceptual plans for the evaluated sites are included in Appendix E.

Section 2.0 Introduction

The Town of Middleborough, Massachusetts to develop this Town Fields Study Report, retained Weston & Sampson Engineers, Inc. in the spring of 2003 The purpose of the report is to inventory, evaluate, analyze study the utilization of existing fields, and examine possible redesign of existing facilities to maximize use and to evaluate and analyze potential new field development sites, through the development of existing or private properties to be acquired by the town.

We wish to express our gratitude to the town staff, public schools department staff, and many sports league representatives, and Athletic Field Committee members, who contributed their guidance, time, knowledge and experience to the development of this report without when the report could not have been completed.

THERE INPOT

Section 3.0 Recommendations & Priorities

This section contains a restatement of the summaries of Sections 4.0 to Section 7.0.

Section 4.0 Field Use Analysis Summary

- Town fields receive the most play during the spring, followed by the fall, which is about as busy as spring. The summer season is the least used.

 - We recommend adoption of the "Realistic" field guidelines discussed in Section 4.2.
 - Growth rate for town sports generally appear to be higher the general population increases.

- All sports are at or nearing full capacity during their prime season. Future team and league expansions will likely require new field development of many different types.
- We recommend construction of a new football game facility to alleviate the overuse at Battis Field.
- Although some needed future fields indicated in Table 4.4-3 may be incorporated in the existing field supply, most will not. New field construction will be required for: 2 baseball 60' diamonds, 3 softball fields, 1 soccer field, and 2 football fields, 2008.

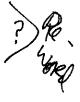

Section 5.0 Existing Facilities Evaluation Summary

Cursory review of the existing facilities recommendations is included below. A more thorough analysis is provided in section 5.2.

General comments common to many of the inventoried sites:

Most of the inventoried facilities are non-compliant to some extent with the Americans with Disabilities Act (ADA) guidelines. The goal of the ADA guidelines is to provide handicapped citizens with "equal enjoyment of goods, services, facilities, privileges, advantages and accommodations," as well as the "right to participate and have an equal opportunity to obtain the same result as others to the extent possible." Where able-bodied spectators are provided space to cheer on sports teams, handicap patrons are to be provided a place amongst the able-bodied to experience the event in a similar way. Where children's play areas are provided, children are to be provided with accessible equipment to enjoy play experiences with other able-bodied children and handicapped guardians accessible ways to supervise them.

At many of the facilities, accessibility for handicapped patrons ends at the edge of the pavement, because only inaccessible grass surfaces or gravel are provided between the parking areas and site features. Play equipment areas located within lawn areas prevent handicapped children and guardians from using them. At some sites, handicapped spectators must view games from a distance.

We recommend the installation of accessible routes of travel at each facility. Dat includes participation and not excludes. Experience has shown that able-bodied patrons often prefer to use the accessible pathways, when available. The accessible pathways provide secondary benefits as well, tending to define and separate different site uses and channel patron ingress and egress. Federal regulations will require future site improvements to be accessible to both child and guardian in both use and access.

to both cilid

NANDICAPICA

onent for furf to

 Most of the sites lack irrigation systems and water is a key component for turf to survive. Installation of such systems will help maintain quality turf surfaces on fields that are heavily used.

The following comments summarize recommendations at specific facilities:

- Burkland School / Mayflower School / Field of Dreams Complex: make remedial repairs mentioned to equipment. The large tee ball can be upgraded to a 200' field by relocating the existing 200' field. Install underground irrigation systems at all fields.
- High School Complex: repair backstop; install protective fences at players benches; implement a written field improvement plan emphasizing prevention; regularly aerate and slice seed turf areas; add new equipment to shorten maintenance tasks; consider regularly and reconfiguration of the baseball / soccer / field hockey area to improve play; install underground irrigation systems to maintain turf vigor; consider field expansion in the former gravel mining area as noted in Section 6.0.
- Pierce Playground: make remedial repairs mentioned to equipment; replace wood
 poles at lower fields with chain link fence; find alternative to use of lower fields
 as a parking area; implement a more aggressive turf management plan to
 encourage turf growth on fields; consider replacement of Battis turf with a
 modern no maintenance synthetic turf system.
- Healey Complex: verify on the ground the limits of surrounding wetlands, in order to pursue expansion possibilities; improve definition and channeling of vehicles in the gravel parking area through the installation of wood guard rails.
- West Side Fields: make remedial repairs noted to existing equipment; no useful reconfiguration of the existing facility to increase use substantially apply new color coating to basketball court; consider expansion of the facility as noted in Section 6.0.

ORE:

Section 6.0 Facilities Expansion Evaluation Summary

The following is a cursory review of the recommendation outlined in Section 6.2.

Council on Aging / Church of the Green: Two potential development areas exist at this site, but all on the privately owned parcels. The site is especially attractive for the construction 1-2 lighted football fields. Moderate to steep slopes in places will require some substantial earthwork.

Green School House: We do not recommend development of the site for field use. Due to wetland and slope constraints, the area able to be developed is too small to contribute substantially to the recreation mix within town.

Healey Complex: No further development is possible at this site, unless field verification of the wetland limits add additional developable land to the site. Expansion possibilities for this site are discussed in greater detail in Section 6.0.

High School Complex: We recommend acquisition of the necessary portion of the adjacent private parcel to permit development of the former gravel mining area into addition town recreational fields. Development of a more premier type soccer and Field Hockey Stadium is our preferred development scenario.

Plymouth Street Property: We cautiously recommend development of some type of athletic facility at the site only after comprehensive wetland identification is completed. Potential space exists for a combination of medium and large size athletic fields. Development here has the advantage of no additional land acquisitions.

Tispaquin Street & Chestnut Street Properties: It is unfortunate that area residents have opposed past recreation development plans for Tispaquin site. Of all the sites evaluated, this is the most easily and cheaply constructed site for a variety of uses and an obvious first choice. We recommend development of this site for athletic use.

We would recommend development of the *Chestnut* site, after further investigations to determine conservation restrictions / penalties for development and existence / extents of any wetland land areas. The site has the potential to be an outstanding recreation complex.

West Side Fields: We recommend acquisition of the private parcels and development of an expanded recreation facility here with a lighted football field.

The High School Complex expansion, the Tispaquin site, and the West side Fields stand out as first choice opportunities for new field spaces. In a close second place, the Council on Aging / Church of the Green site offer additional football fields, in an area where few

φ.

will be disturbed. The remaining sites are not recommended or require additional study to make a final determination.

Section 7.0 Maintenance

Field and turf quality and conditions vary widely between the various fields evaluated.

One reason is unequal levels of care and maintenance applied to individual fields. We recommend the implementation of a written maintenance standard to equalize the maintenance playing field.

Another reason is a lack of underground irrigation systems to keep the field turf vital and healthy. We recommend a programmatic installation of such systems as soon as time and funds permit.

Section 4.0 Field Use Analysis

4.1 Summary

• Town fields receive the most play during the spring, followed by the fall, which is wearn as busy as spring. The summer season is the least used.

- We recommend adoption of the "Realistic" field guidelines discussed in Section 4.2.
- Growth rate for town sports, generally appear to be higher the general population increases.

- All sports are at or nearing full capacity during their prime season. Future team and league expansions will likely require new field development of many different types.
- We recommend construction of a new football game facility to alleviate the overuse at Battis Field.
- Although some needed future fields indicated in Table 4.4-3 may be incorporated in the existing field supply, most will not. New field construction will be required for: 2 baseball 60' diamonds, 3 softball fields, 1 soccer field, and 2 football fields.

4.2 Introduction

This report section analyzes the actual time used at the existing field facilities in order to determine the extent of field utilization; in order to determine present and future field quantity requirements.

To perform this analysis, survey forms were forwarded to all organized town leagues and identified field users. The survey forms gathered data regarding league season start and end dates, team sizes and quantities, age distribution and quantity of players, fields and times used, quantity and length of games and practices, and comments regarding field availability and maintenance issues.

-NUMBER

The survey data was then organized into two sets of tables. One set of tables compiled an inventory of the time each individual field was scheduled for use (Scheduled Time Data.) A second set of tables calculated the quantity of field hours required to play a particular sport by mathematically combining team quantity, length and quantity of games played per week, length and quantity of practices per week, with adjustment factors for home and away game play, rain makeup dates, times when field use is shared between two or more sports, and field setup / takedown time (Game Rate Data.)

We analyzed and compared the data contained in the two sets of tables. Ideally the time tabulated by each method should be approximately the same. We found that the Game

Page 4.0-1

Rate Data calculations were within plus or minus 10% of the Scheduled Time Data for individual sports during their respective prime season, but to rigid to accurately predict existing field utilization during the off seasons. This appears due to exceptions, like shared use conditions, league play ending abruptly part way through the season, etc., which are difficult to account for mathematically.

Q.?

To understand the extent of existing field utilization, we examined the Scheduled Time Data for each respective sport and season, looking for any free time available for use by the leagues on all appropriate fields. The results were noted in a descriptive manner, such as, "at full capacity" or "some free time available". The data in this set of tables provided adequate indicators of whether playing time was available or not.

Future field requirements were determined by calculating the difference between existing Game Rate Data and projected Game Rate Data. The result was then divided by the quantity of hours available to a sport by one field to calculate the number of fields needed. Adjustments were made to include provision for the "realistic recommendations" described below.

Ideal Utilization

To provide a better understanding of the analysis and recommendations in this report, it is useful to compare the industry standard recommendations with the assumptions used in this report. The industry standards and report assumptions can generally be divided in two categories - "ideal utilization" and "realistic utilization assumptions." The list below outlines some of the ideal recommendations of turf professionals regarding the use and maintenance of athletic facilities.

- Industry field and turf professionals recommend limiting field event scheduling to 25-50 events (100-250 hours) of use per year. Field turf areas become noticeably thin and bare beyond this limit.
- Each field should receive eight (8) weeks rest (no use at all) during the active growing season each year to allow the turf to rejuvenate prior to next year's use.
- Each field will receive !" minimum of water, through rain or irrigation, each week to maintain healthy and vigorous growth.
- Turf will receive the same level of industry recommended maintenance during active, inactive, and field rest periods. Industry maintenance standards are discussed in Section 7.0 of this report.
- Each field should receive one (1) full year of rest every four (4) years to permit turf to rejuvenate itself and develop a sufficient "thatch" layer to ensure player safety. (Although seasonal thatch removal is a normal part of turf maintenance, athletic fields

require a certain thickness of thatch to protect roots from players and to cushion players from injury.)

• Football, Soccer, and Lacrosse tend to be more damaging to turf than other sports such as baseball, etc. Thus to prevent overuse of field turf, shared use field (e.g. soccer teams using baseball outfields) tends to be discouraged by field maintenance professionals.

Based on the "ideal utilization" recommendations listed above, town fields could typically be used for only several hours per week for one of the three sports seasons. Fields not irrigated would receive only minimal summer scheduling to prevent severe turf damage, while either spring or fall would remain as scheduled "rest" periods. Weston and Sampson thinks that it is unrealistic for most municipal recreation and maintenace departments to administer these ideal recommendations as a whole. Budget, personnel and facility supply limitations require a more "realistic utilization" of athletic facilities.

Realistic Utilization

- Field scheduling should be limited to 75-90% of maximum per week to allow sufficient rain date game replays; allowance for field, player, and equipment setup / takedown time; and some measure of in season rest.
- Sufficient field quantities should exist to permit fields to be rested for three to six months during the growing season every two years.
- Fields not irrigated should be scheduled for minimal use during the summer season, and play rotated frequently during the season to minimize turf damage, which occurs easily during hot dry summer months.
- Implement a field improvement program to systematically provide on-site irrigation systems for each town field. This will allow summer months, currently the least utilized season of the year, to be used as a rest and rejuvenation period for turf.
- To maintain sufficient thatch levels and vigorous turf, all fields should receive the industry recommended levels of maintenance throughout the growing season.
- Players should not use fields when turf is excessively wet, as severe turf damage can occur when used under these conditions, requiring extensive repairs.

Play on Multi-Use Soccer fields should be routinely rotated, where possible, to minimize areas of turf damage and wear.

4.3 Field Use Analysis

Field Users & Field Resources

Table 4.3-1 summarized the existing field users and season of use. Six (6) users provide services to school age children only (Nichols Middle School League, Middleborough

Notes:

Table 4.4-3 Projected Team Growth Impact and Future Field Requirements

Season / Description	Existing Field Use (Hours)	Projected Field Use (Hours)	Change (Hours)	Hours Required per One Field	Increase in Teams in 2008	Fields Required
Spring						
Baseball 90' (Unrestricted Use Time)	89.3	99.2	+9.9	39	+1	+1
Baseball 60' (Unrestricted Use Time)	260.4	327.6	+67.2	39	+8	+2
Softball (Unrestricted Use Time)	145.8	261.0	+115.2	39	+24	+3
Summer						
Baseball 60' (Unrestricted Use Time)	260.4	327.6	+67.2	39	+8	+2
Football (Unrestricted Use Time)	170.7	217.5	+46.3	39	µ ↓	+1 Game +1 Pract.
	<u> </u>					
Soccer (School Use Period)	81	90	+9	12.5	+1	+1
Soccer (Unrestricted Use Period)	99	198	+99	24	+21	+3
Football (Unrestricted Use Period)	96.3	143.1	+46.8	39	+6	+1 Game +1 Pract.

The analysis indicates all sports are at or nearing full capacity during their respective prime seasons. A new Football game facility is recommended to alleviate overuse at Battis Field.

It may be possible for the Babe Ruth League to incorporate the one expected new Baseball 90' team into their existing schedule, without the need to construct the new baseball diamond indicated in Table 4.4-3.

The new soccer field identified during the School Use Period can likely be accommodated at one of the existing facilities as the bulk of the practice is before the evening recreational leagues compete for field time. Transportation for the team may be necessary. However, any weekend games must fit into an already tight schedule.

Putting the two resting fields online eliminates the need for some new construction required for projected soccer expansion during the Unrestricted Use Period. However, the overall soccer field system will suffer when the fields are unable to rest.

The remaining fields identified in the table will be required to maintain future playing levels.

We recommend that town officials be on the watch for other emerging sports that may request field time. Flag Football (non-contact), recreational Field Hockey, Lacrosse and Fall Baseball/Softball Leagues that are beginning or established in some Massachusetts communities; adding league level play to fields without noticeably reducing participation rates in other sports.

Section 5.0 Existing Facilities Evaluation

5.1 Summary

Cursory review of the existing facilities recommendations is included below. A more thorough analysis is provided in section 5.2.

General comments common to many of the inventoried sites:

Most of the inventoried facilities are non-compliant to some extent with the Americans with Disabilities Act (ADA) guidelines. The goal of the ADA guidelines is to provide handicapped citizens with "equal enjoyment of goods, services, facilities, privileges, advantages and accommodations," as well as the "right to participate and have an equal opportunity to obtain the same result as others to the extent possible." Where able-bodied spectators are provided space to cheer on sports teams, handicap patrons are to be provided a place amongst the able-bodied to experience the event in a similar way. Where children's play areas are provided, children are to be provided with accessible equipment to enjoy play experiences with other able-bodied children and handicapped guardians accessible ways to supervise them.

At many of the facilities, accessibility for handicapped patrons ends at the edge of the pavement, because only inaccessible grass surfaces or gravel are provided between the parking areas and site features. Play equipment areas located within lawn areas prevent handicapped children and guardians from using them. At some sites, handicapped spectators must view games from a distance.

We recommend the installation of accessible routes of travel at each facility. thatincludes participation and not excludes. Experience has shown that able-bodied patrons often prefer to use the accessible pathways, when available. The accessible pathways provide secondary benefits as well, tending to define and separate different site uses and channel patron ingress and egress. Federal regulations will require future site improvements to be accessible to both child and guardian in both use and access.

Most of the sites lack irrigation systems and water is a key component for turf to survive. Installation of such systems will help maintain quality turf surfaces on fields that are heavily used.

The following comments summarize recommendations at specific facilities:

Burkland School / Mayflower School / Field of Dreams Complex: make remedial repairs mentioned to equipment. The large tee ball can be upgraded to a 200' field by relocating the existing 200' field. Install underground irrigation systems at all fields.

- High School Complex: repair backstop; install protective fences at players benches; implement a written field improvement plan emphasizing prevention; regularly aerate and slice seed turf areas; add new equipment to shorten maintenance tasks; consider regularly and reconfiguration of the baseball / soccer / field hockey area to improve play; install underground irrigation systems to maintain turf vigor; consider field expansion in the former gravel mining area as noted in Section 6.0.
- (J)
- Pierce Playground: make remedial repairs mentioned to equipment; replace wood poles at lower fields with chain link fence; find alternative to use of lower fields as a parking area; implement a more aggressive turf management plan to encourage turf growth on fields; consider replacement of Battis turf with a modern no maintenance synthetic turf system.

- Healey Complex: verify on the ground the limits of surrounding wetlands, in order to pursue expansion possibilities; improve definition and channeling of vehicles in the gravel parking area through the installation of wood guard rails.
- \mathcal{O}
- West Side Fields: make remedial repairs noted to existing equipment; no useful reconfiguration of the existing facility to increase use substantially apply new color coating to basketball court; consider expansion of the facility as noted in Section 6.0.

5.2Existing Facilities

Introduction

Weston & Sampson Engineers, Inc. visited several existing recreation facilities selected by the Athletic Playing Fields Committee. Our purpose was to assess the quantity and quality, facility condition, types of recreation experiences offered and supporting site amenities, and examine possible redesign of the facilities to maximize use. Conceptual Plans for facilities where redesign or reconfiguration opportunities exist are included in Appendix E.

The following facilities comprise the sites selected by the committee for evaluation:

- 1. Burkland School / Mayflower School / Field of Dreams
- 2. High School Complex
- 3. Pierce Playground
- 4. Healey Soccer Complex
- 5. West Side Fields

Burkland School / Mayflower School / Field of Dreams

The site is located between East Grove Street (State Route 28) and Mayflower Avenue. The neighborhood is a mixed commercial and residential area. An overhead utility corridor and the Nemasket River bound it on the East side. Several small-localized wetland resource areas appear to exist on the south side.

The complex is composed of two functioning public schools, Burkland and Mayflower, and the Field of Dreams Athletic Complex, which abuts East Grove Street. Recreational resources at the site consist of the following:

Three (3) 60' Little League Diamonds; only one of which is lighted. The lighted field was constructed with ideal North-Northeast orientation. Two of the fields appear to be recently constructed.

Three (3) Tee Ball fields used for baseball. The larger of the three tee ball fields requires repairs to the baseball backstop. The infield on the field on the far side of the site is small and substandard.

One (1) lighted Soccer Field. The field just completed a complete turf renovation.

Play equipment areas for use during school recess.

The turf on the three fields associated with the "Field of Dreams" complex stands as a model of what quality athletic field turf can be. Indeed the turf is among the best of any field in Massachusetts. The surface is lush, green, thick and well cared for. Every effort should be made to duplicate the results on these fields at the remaining town facilities. The fields are fully irrigated.

The turf at the remaining 60' diamond appears much less perfect than the adjacent Field of Dreams fields, but appeared in good condition on the day of our visit. Several bare spots were noted in the outfield. Some field users rate the turf as only fair, which may mean that in dry weather, the turf does not perform well.

A concession and restroom facility exists at the Field of Dreams complex.

Handicap accessibility is poor at the complex, due to the many gravel parking areas and walkways.

Recommendations:

- Repair fences and backstop at the larger tee ball field.
- If the older 60' diamond is relocated to the west, eliminating the existing gravel parking area, it appears that the larger tee ball field could be replaced by a fourth 200' outfield diamond.
- The far west tee ball field should be upgraded to a standard size infield for better incorporation into the league schedule. If the lawn drainage swale were piped underground, the large turf area directly in front of the tee ball could be redeveloped into several good small side soccer pitches or tee ball fields. As players at that level cannot hit far.
- As new improvements are made at the complex, incorporate Handicap accessibility elements to comply with current standards.
- Install underground irrigation systems at all fields as time and funding permit to allow all fields to look like the field of dreams.

High School Complex

The site is located on East Grove Street (State Route 28) and is in close proximity to the Fields Of Dreams Complex. The site is bounded by an Interstate 495 Motorist rest area and an abandoned gravel mining area on the South; the Nemasket River, some related wetlands and commercial properties on the West; East Grove Street and commercial properties on the North; and residential housing and a privately owned wooded area on the East.

A FEMA Flood Insurance Zone, a 100' Wetland Buffer Zone, and a 200' River Protection Zone exists to the West along the property line adjacent to the river. However, they exist well away from any existing or potentially developed areas on site.

The site contains three softball fields. A lack of paved pads under players benches in dugout areas, creates mud bowls to pond rain water and increases maintenance. The infield mixture at the field to the far South of the site washes out, because the field is built at the natural low point of the site, where all storm water from the adjacent fields concentrates before running off into the gravel pit. Regrading the field best solves the problem. One of the fields is built on top of a large plateau overlooking the baseball field. The 200' limit for softball ends at approximately the top of the slope, causing home runs to roll down the hill.

A 90' baseball diamond occupies the center of the field complex. The backstop is damaged, requiring repair or replacement. The players benches lack protective fences or paved pads beneath. The field hockey field (left field) and soccer field (right field) share the outfield area.

The field hockey and soccer areas appear too steeply sloped, due to site grading. Town aerial mapping plans indicate a 5-6 foot elevation difference between the ends of the field, which is greater than recommend. Some users find the space unsuitable for game play.

The school running track with grassed football practice area is located East of the baseball field. The track surface appears in good working order. Aerial photographs show severe wear areas in the spring from the fall football practice.

A six court tennis complex is adjacent to the track. The area appears in good working order.

A full court basketball area occupies the space between the parking lot and the maintenance shed. Several large weed filled cracks can be seen in the pavement, which require repairs.

Because of the rainy season this year, the field turf area appeared lush and green with large mottled dark and light greens areas. The lighter green patches appear to be narrow leaf weed species of grass mixed into the turf. These can sometimes be an indicator of compacted field soil and turf, which is remedied by turf aeration and regular slice reseeding. During the dry summer months, these weed grasses usually brown out early, presenting a hardened surface to athletes using the field. Some users of the High School complex rated the turf quality as poor to fair.

Reconfiguration of the baseball, back softball, field hockey, and soccer fields would permit the soccer and field hockey area to sit higher on the sloping land, allowing for the preferred side to grading. This would allow the fields to be used for game and practice play. To achieve this, the softball field would be relocated to the small wooded grove of trees beside the maintenance shed.

The complex presents visitors Handicap access problems for spectators arriving to watch games.

The gravel mining area presents new field development possibilities, which are discussed in Section 6.0.

Recommendations:

- Implement repairs to the baseball backstop.
- Provide protective fencing at all players benches where absent.
- Repair cracks in the basketball court pavement.
- Develop and implement a strict written maintenance plan for the field turf, emphasizing prevention. Add new equipment as appropriate to shorten time needed to perform repetitive maintenance tasks, allow maintenance personnel more time to improve the turf. Regularly reseed and aerate the all turf areas.
- Consider reconfiguration of the fields as mentioned above to solve grading problems and allow better play on the soccer and field hockey fields.
- Install an in ground irrigation system to keep the fields at their prime.

Pierce Playground

The site is located on Jackson Street, just outside of the central business district. The neighborhood is primarily populated with commercial establishments, with some private residences to the North. The site is bounded by a public school on the East and the Nemasket River on the West.

Hilly best describes the topography of the site. The site elements are constructed on a series of terraces within a long slope leading to the Nemasket River.

Site features include: three softball fields; one formal and two informal tee ball fields; one 90' baseball field; the Battis football field and wood structure stadium; an open air public swimming pool and bathhouse; concession stand; park headquarters building; two play areas; two basketball courts; four shuffle board courts; a four court tennis complex; paved parking area; a bandstand; and a skateboard park.

The upper ball fields appear to be well maintained, with only some minor problems. Some of the player benches are set higher than normal and others lack protective fencing. Chain link fence fabric at all the backstops at the 90' baseball / tee ball area are torn, bent or damaged, requiring repair. The turf contains some areas of narrow leaf weed species and clover.

The lower softball fields are widely spaced, allowing football practice in the joint outfield. This perimeter of the lower area is ringed with 2-3 foot high wood utility posts, presumably installed to keep cars within the field area, when it is used for Cobra football

game parking. The posts seem to perform no function, as some are wide enough to drive a vehicle through, while presenting a hazard to game players running into them unaware. They also prevent the adjacent grassed slope from being use for winter sports by children. Turf quality at the lower fields is fair to poor. The soil is compacted and bare spots exist, one large area in center appears left over from last year's football practice. Large puddles form in the worn areas under the player benches after rainstorms.

The Battis football field looks to be in good condition. However, the turf is much thinner in many places than preferred for the start of football season, when inspected in mid-August. Field irrigation is accomplished with large water cannons only; no in ground irrigation system exists. Field users complain of deep ruts wearing into the sidelines during the football season.

Battis field users think the field is over used. Four football clubs use the field for all game play.

The adjacent wood bleacher system appears in good working order.

The shuffleboard courts seem somewhat out of fashion today. Development of a bocce court may better serve park patrons and possible area bocce leagues.

The parking lot is cracked and uneven in places, but serviceable. A few extra paved spaces could be added behind the baseball field to increase capacity.

The tennis court is in good condition and the upper play area is brand new. The lower play area is functional, but not handicap accessible.

The lower basketball court has some cracks and large holes in the pavement, making play here unsafe.

The Skateboard Park contains many deep puddles after a rain, leaving the area unusable for many hours after.

Support posts and other surfaces on the bandstand are chipped or broken and require repair.

Recommendations:

- Make remedial repairs to the fences, backstops, and other locations noted above.
- Remove wood posts from the lower fields and replace with a chain link fence on the riverside of the field.
- Halt the parking of cars on the lower ball fields, this practice compacts and damages soil and turf areas to a great extent. Open the large gates on the South side of the football field, after making arrangements with area businesses to utilize unused spaces outside of the park, during game events.

- Patch holes in the lower basketball court.
- Install an asphalt-leveling course on the skateboard park pavement to eliminate puddles.
- Implement a more aggressive turf management plan to encourage plant growth and remove weed species of grass.
- At this time we think too many ball clubs use Battis field and recommend finding alternate game spaces, building a new field is one option. Another option is the installation of a synthetic turf field at Battis. This would provide perfect play conditions year round, with little maintenance. Game scheduling can even be increased at the field under this alternative.
- Install temporary football sideline protective coverings to minimize rutting and damage to turf.

Healey Soccer Complex

The site is located on Purchase Street on the West side of town, near the Carver town line. Heavily wooded areas bound the site on the North by residential housing and on the remaining sides. Access to the site is via a long narrow gravel driveway, between two residential properties.

Site features include: three full size soccer fields, a concession stand, restrooms, and a gravel parking area.

State wetland maps show wetland resource areas within the wooded areas beside the soccer fields, almost to the tree line, surrounding the playing fields. If an additional 50 feet can be gained by clearing a portion of the wooded areas on the South side of the complex, the two soccer fields on that side could be rotated and 1 or 2 new fields possibly added. No other reconfiguration schemes appear likely.

The gravel parking area is not well defined from the adjacent grass areas. In these situations, event parking can sometimes become haphazard as patron park as they please.

The turf quality on the day of our site visit was outstanding. Like some of the turf areas at the Field of Dreams complex, it is a model of what athletic turf can be. The town should apply the practices used at these fields to the other fields in place. The turf is lush, green, relative weed free, well graded and pitched.

The site lacks paths and other amenities making access friendly to handicapped patrons.

Recommendations:

- Confirm the limits of wetlands surrounding the site with the goal of expanding the playing area slightly.
- Improve site ADA compliance and handicap accessibility.
- Install wood guardrails around the parking lot perimeter to protect fields and better define the limits of parking. Using aerial mapping, four rows of stalls fit within much of the existing area. Guardrails and wood pole wheel stops will encourage more efficient use.

West Side Fields

2

The site is located on the corner of West End Avenue and Hathaway Street. At present, Hathaway Street exists as a gravel path between two map Right of Way lines. The neighborhood is of a suburban residential character. A perennial stream divides the site with a recently constructed group of children's play structures in the Northern portion and the field's areas in the Southern portion. A low grassed slope divides the ball field area from the upper Hathaway Street Portion of the property.

The parcel encompasses a 200 foot river protection zone, 100 foot wetland resource buffer and a FEMA Flood Insurance zone. Maps show the flood zone covering much of the field area.

The site includes: gravel parking areas, a group of new children's play structures; two 60' baseball diamonds; a large open field area, and a basketball court.

The two baseball diamonds are both unlighted. One has conversed player dugouts and grassed infield, while the other has chain link fencing only at the players benches and a skinned infield. One of players benches on the skinned field is broken and requires repair. Chain link fencing surrounds the perimeter of both fields. An underground irrigation system exists at the grassed infield diamond.

The turf at the open field area to North of the baseball diamonds is more of a frequently mown meadow grass than an athletic turf. It is sparse in places and of coarser nature than the baseball turf. We observed standing water within the woods to the North, which is probably spill over from the pond located to the North.

On the day of our visit, large deep puddles were observed between the two baseball outfields fences and the low grass slope that separate the fields from the Hathaway Street portion, extending partway in the outfield turf.

Access to the skinned baseball field is from the gravel parking area along West End Avenue. Patron access to the other field is from an informal parking area on upper Hathaway Street level.

No visible cracks exist in the basketball court pavement, but the surface appears worn and needs new color sealcoating. The basketball standards are also worn and lack nets. Access and visibility of the court from the Street is poor.

Pedestrian and vehicle access at the site appear haphazard, unchanneled, and unplanned. None of the site features are handicap accessible.

Recommendations:

- Wetland and other environmental issues prevent and useful reconfiguration of the
 existing baseball fields. The outfield fences could be removed and major
 improvements to the meadow area to the North made to allow a multi-field / sport
 use.
- Repair the players bench areas.
- Improve definition of the parking areas to indicate the intended parking scheme to park patrons.
- Implement improvements to the access to the site features accessible and friendly to handicapped patrons.
- Apply new color sealcoat to the basketball court. Make repairs to the nets.
- Park expansion opportunities exist for this site and are discussed in Section 7.0 of this report.

Section 6.0 Facilities Expansion Evaluation

6.1 Summary

The following is a cursory review of the recommendation outlined in Section 6.2.

Council on Aging / Church of the Green: Two potential development areas exist at this site, but all on the privately owned parcels. The site is especially attractive for the construction 1-2 lighted football fields. Moderate to steep slopes in places will require some substantial earthwork.

Green School House: We do not recommend development of the site for field use. Due to wetland and slope constraints, the area able to be developed is too small to contribute substantially to the recreation mix within town.

Healey Complex: No further development is possible at this site, unless field verification of the wetland limits add additional developable land to the site. Expansion possibilities for this site are discussed in greater detail in Section 6.0.

High School Complex: We recommend acquisition of the necessary portion of the adjacent private parcel to permit development of the former gravel mining area into addition town recreational fields. Development of a more premier type soccer and Field Hockey Stadium is our preferred development scenario.

Plymouth Street Property: We cautiously recommend development of some type of athletic facility at the site; only after comprehensive wetland identification is completed. Potential space exists for a combination of medium and large size athletic fields. Development here has the advantage of no additional land acquisitions.

Tispaquin Street & Chestnut Street Properties: It is unfortunate that area residents have opposed past recreation development plans for Tispaquin site. Of all the sites evaluated, this is the most easily and cheaply constructed site for a variety of uses and an obvious first choice. We recommend development of this site for athletic use.

We would recommend development of the *Chestnut* site, after further investigations to determine conservation restrictions / penalties for development and existence / extents of any wetland land areas. The site has the potential to be an outstanding recreation complex.

West Side Fields: We recommend acquisition of the private parcels and development of an expanded recreation facility here with a lighted football field.

The High School Complex expansion, the Tispaquin site, and the West side Fields stand out as first choice opportunities for new field spaces. In a close second place, the Council on Aging / Church of the Green site offer additional football fields, in an area where few

will be disturbed. The remaining sites are not recommended or require additional study to make a final determination.

6.2 Site Evaluations

Weston & Sampson Engineers, Inc. visited several town owned land parcels selected by the Athletic Plaving Fields Committee to assess the middle of the second th the Athletic Playing Fields Committee to assess the suitability of each parcel for the construction of new athletic fields within town. Some of the parcels require the acquisition of privately owned land to make development of a new facility feasible. Conceptual Plans for parcels discussed in this section are included in Appendix E.

The following properties comprise the sites selected by the committee for evaluation:

- 1. Council on Aging / Church of the Green
- 2. Green School House
- 3. Healey Complex
- 4. High School Complex
- 5. Plymouth Street Property
- 6. Tispaquin Street & Chestnut Street Properties
- 7. West Side Fields

Evaluations & Recommendations

Council on Aging / Church of the Green

This site is really a group of town and privately owned parcels located between Plymouth Street, Plympton Street, and U.S. Route 44. The site is heavily wooded with dirt paths meandering through, used mainly by off road vehicles and motorbikes. The topography is hilly and rolling with some slopes, as the town aerial maps show. The parcels reviewed are Nos. 3811, 2951, 3016, 3025, 2293, 2368, and 3099 on Tax Map 42.

The parcels roughly can be categorized into two groups separated by a long parcel appearing as an old rail or road Right of Way (ROW). The group South of the ROW parcel is composed of two large properties, the existing Council on Aging (COA) facility and a wooded area owned by the adjacent church. The group North of ROW parcel is composed of several long thin properties, some of which are contiguous with Route 44 and Plympton Street.

Parcel 2951 was eliminated from consideration, as it is composed almost entirely of wetlands and FEMA Flood zones according to available mapping. Parcel 3811, the COA land directly North of the parking lot is too small for field development, but large enough for additional parking spaces, if necessary.

Two areas of development were chosen, all on privately owned parcels, one at the church owned parcel 3099 (South site) and another using parcels 3025, 2293, and 2368 (North site).

In our opinion, only the Southern half of the South Site is attractive for field development. The North portion of this parcel has huge elevation changes, in excess of 35 feet. About a 200' x 350' wide swath could be carved out of the hill, if desired, at the expense of trucking away material. The Southern portion is flat enough to easily construct two 200' diamonds / shared use soccer and parking, without disturbing the adjacent hillside. The parking can be developed nearest Plympton Street side of the land, where access is easy.

The Northern site is attractive, because of its proximity to Route 44 and location at the foot of a steep slope. The combined parcels width is enough to construct several 200' diamonds or the preferred scheme of 1-2 lighted football fields. The site has good potential for lighted football field construction, as site has virtually no direct residential abutters to be disturbed by light spill, and the parcel is situated next to a noisy and busy major highway with bright vehicle headlamps passing regularly. Good site access is available from Plympton Street.

Construction costs for these sites will be higher than some of the other choices, because of the potential earthwork involved. We would recommend construction of either project, as they will both support various types of athletic fields, but would encourage the football field options at the Northern site strongly.

Green School House

This site, Parcel 4844, is a 7.2-Acre Parcel located on the corner of East Main Street and Wood Street. The neighborhood is almost entirely residential. A small painted green wood frame one-room schoolhouse exists at the Northeaster corner of the property. The portion of the site under consideration for field development appears as a former gravel mining area. The Town currently uses the site to dump organic debris: is used for the blooms with the work.

The site has several features that severely constrain development. A perennial stream with several tributary drainage ways crosses the site, which available mapping suggest contain extensive wetland resource areas. The wetland buffer, drawn based on available general statewide mapping, seems closer to the tree line than depicted. A large slope exists on the Southeastern edge already cut back to a point near the property line, which limits further expansion of the developable area.

We do not recommend development of the site for field use. Due to wetland and slope constraints, the area able to be developed is too small to contribute substantially to the recreation mix within town.

Healey Complex

No further development is possible at this site, unless field verification of the wetland limits add additional developable land to the site. Expansion possibilities for this site are discussed in greater detail in Section .0.

High School Complex

The High School expansion parcel consists of the town and privately owned portions of the former gravel mining area to the South of the baseball field and adjacent to Interstate 495. Acquisition of a portion of the private parcel will be necessary to accomplish substantial development gains.

The site is bounded on West by the Nemasket River, which contains wetland resource areas, FEMA Flood Insurance Zone, 200' river protection zone, and wetland buffer zones. However, these are far enough away to generally avoid any disturbance there.

The area to be developed lies at the bottom of a steep slope beyond the baseball outfield. Bare patches of gravelly material and scrub trees and shrubs characterize the existing topography. The land is generally level, but a moderate slope exists in the wooded area to the Eastern side of the gravel private parcel.

The concept plan included in Appendix E, illustrate that a full size soccer field, small practice field, and companion stadium seating built into the hillside can be accomplished. The most difficult aspect of the project is providing suitable handicap accessibility. After overcoming development obstacles, the site could become a premier athletic venue to rival Battis Field. Ample parking is available in the school parking lots after school hours and the nearby Burkland / Field of Dreams complex could be used with shuttles for large events.

Although we did not explore the option in depth, a full size soccer field could also be easily built on the wooded private parcel adjacent to the tennis and track area. The land is somewhat level and at a similar elevation to the nearby track area. This LAND is owned by the Boston Diocess of The Christians (Huncfl.)

We recommend acquisition of the necessary portion of the adjacent private parcel to permit development of the former gravel mining area into addition town recreational fields. Development of a more premier type soccer and Field Hockey Stadium is our preferred development scenario.

Plymouth Street Property

This site, town owned parcel 2168 of Tax map 19, is a 42.3-Acre property located on Plymouth Street, in the North Middleborough section of town. Woods and residential homes abut the parcel. A free flowing stream, tributary to the nearby Otis Pratt Brook, divides the site. The topography is generally very flat and vegetated with a mixed pine-hardwood forest canopy. The parcel is conveniently located near State Routes 18 and 28.

Development of the site in any way is contingent upon a complete and thorough identification of the wetland resource areas on the parcel. On the ground observation shows the portions of the site to be very flat, which may enlarge the wetland land areas due to poor drainage and hydric soils, and some large rocks scatter infrequently. The concept plan in Appendix E indicates were the statewide mapping suggests wetlands may exist, which is approximately over half of the site.

Therefore, the concept plan shows a modest amount of development within the Northern portion. Two 60' diamonds, a full size soccer field, children's play area, and parking facilities are proposed for the site. The parking is laid out similar to the Healey Complex, in order to keep the noise of entering and exiting cars at a comfortable distance from the nearby homes.

We cautiously recommend development of some type of athletic facility at the site; only after comprehensive wetland identification is completed. Potential space exists for a combination of medium and large size athletic fields. Development here has the advantage of no additional land acquisitions.

Tispaquin Street & Chestnut Street Properties

The evaluated properties are comprised of sites in two different areas, both along Chestnut Street.

The first site, the *Tispaquin* property, consists of the of two town owned properties, parcels 1077 and 2531 and privately owned parcel 3415, all on Tax map 61; located at the corner of Chestnut Street and Tispaquin Street. Suitable site development is not contingent on acquisition of the privately owned parcel. However, purchase of the parcel allows construction of large field areas in the most easily developed area. The concept plan in Appendix E illustrates field placement after this manner.

The topography of the site is relatively flat and easy to work. It is forested with a pine-hardwood mix. Occasional large boulders are visible at the site. Due to the extensive wooded areas, the neighborhood has a more quiet rural feeling than in some other area of Middleborough. The available statewide mapping shows no wetland resource areas on site.

In the concept plan, site access and parking are shown connecting to Tispaquin Street, but could be easily be modified to access Chestnut Street. The site is spacious enough to accommodate several large fields (full size soccer or 90' baseball), if required.

Optionally, development can be scaled down to a smaller quantity of fields, constructed in the Southwest corner of the site, leaving generously wide swaths of buffer forest areas between the fields and neighboring homes.

The concept plan shows the possible development of two full size soccer fields and a combination 60' diamond / shared use soccer field. However, a wide variety of field sizes can be constructed on the site.

It is unfortunate that area residents have opposed past recreation development plans for this site. Of all the sites evaluated, this is the most easily and cheaply constructed site for a variety of uses and an obvious first choice. We recommend development of this site for athletic use.

The *Chestnut* site, town owned parcels 4743 on Tax map 52, and parcels 4112 and 3685 on Tax map 53. Parcel 4743 is under control of the town conservation commission, presumably as Chapter 61 conservation restricted land. The three parcels also abut Chestnut Street and Tispaquin Street, but at widely space distances.

The site is a mostly hardwood forested area with occasional isolated lands subject to flooding. Extensive wetland areas were not obvious during our site visit. Cranberry bog farms bound the site on the North, while the remaining sides are heavily wooded with isolated residences.

An advantage of development of this site is that field areas will exist far from the abutting residential areas. The concept plan included in Appendix E illustrates a conservative approach to site development. The wetland limit and buffer are best guesses based on the proximity of the cranberry bogs and simple site observations. The statewide mapping does not indicate any wetland areas within the site. The concept plan proposes the construction of several multiple field areas with parking interspersed throughout.

In the absence of additional data, it is possible that large areas are available to construct multi-field complexes, with thick-forested buffers between the fields and adjacent residences.

We would recommend development of the Chestnut site, after further investigations to determine conservation restrictions / penaltics for development and existence / extents of any wetland land areas. The site has the potential to be an outstanding recreation complex.

West Side Fields

The West Side Fields expansion site consists of a mix of privately owned land and town owned paper street rights-of-way. The neighborhood character is that of a suburban residential area. The site is directly adjacent to the existing upper informal parking area, field complex and basketball court, appearing as an open meadow with tall grass.

Although several environmental issues are connected with the lower fields area, the expansion area exists at an elevation 6-10 feet higher and well away from the river and wetland buffers. The area may still be included in the FEMA Flood Insurance Zone calculated by the government. A special change to the flood map may be required to construct without restriction.

fond, of

The conceptual plan included in Appendix E illustrates the development potential for the site. The existing informal upper parking area would be formalized with paving and guardrails. Two 60' diamonds or under our preferred scheme, one lighted football field would be constructed next to the parking area. Pedestrian pathways, located within the paper street rights-of-way give neighborhood residents in many directions easy access to the new park.

We recommend acquisition of the private parcels and development of an expanded recreation facility here.

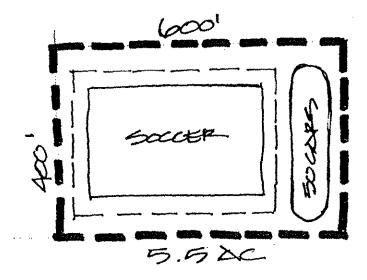

Conclusions

The High School Complex expansion, the Tispaquin site, and the West side Fields stand out as first choice opportunities for new field spaces. In a close second place, the Council on Aging / Church of the Green site offer additional football fields in an area where few will be disturbed. The remaining sites are not recommended or require additional study to make a final determination.

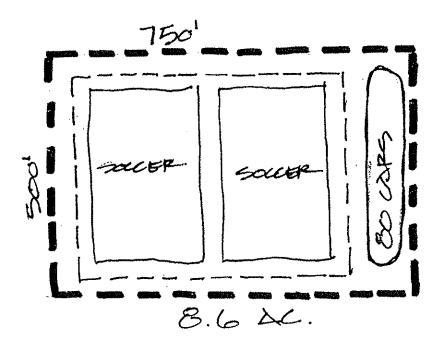

6.3 Athletic Field / Facility Templates

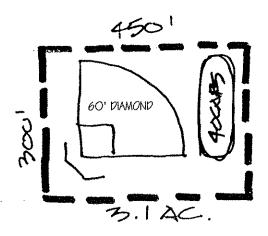

For planning purposes only, the templates below are provided to indicate the approximate land sizes required to develop simple recreation facilities and fields.

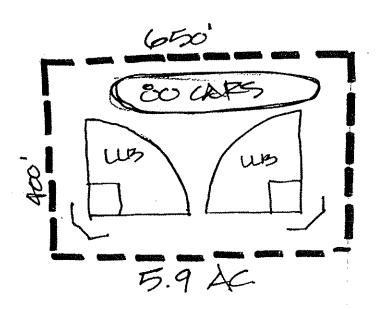

Template 1 - One Championship Soccer Field with Parking.

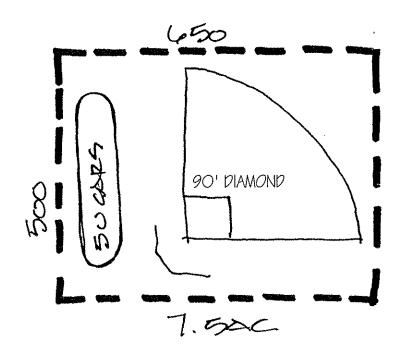

Template 2 - Two Championship Soccer Fields with Parking.

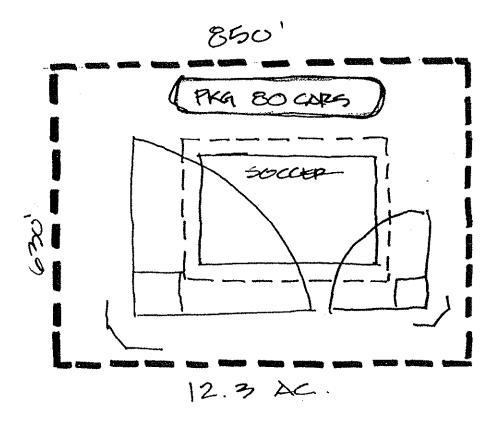

Template 3 - One 60' Diamond with Parking.

Template 4 - Two 60' Diamonds with Parking.

Template 5 - One 90' Diamond with Parking.

Template 6 - Multi-Use Field including 90' Diamond, 60' Diamond, Championship Soccer Field, and Parking.

Section 7.0 Maintenance

Field observations and comments included in the field user survey forms indicate that the quality and appearance of turf and playing fields currently in use are variable in their condition. The variability exists within both the School sites and the town park sites. Survey respondents rated maintenance at some sites as good, while others were judged as fair to poor.

A major factor contributing to the variable condition among town fields is a lack of onsite irrigation. The Field of Dreams turf, which appears lush and green well into Fall, has an extensive irrigation system in place to maintain a quality turf. Adequate watering allows the field turf to more easily repair itself after wear and damage. Play on fields, where turf is stressed due to insufficient water, is damaged much more easily and extensively during game events, while healing takes significantly longer. We recommend implementation of a field improvement program to install irrigation systems at all town fields to keep fields in their best condition. The water cannons used on some fields may not deliver water to thirsty turf with the precision and frequency to keep fields in tiptop shape.

Another factor contributing to the variable field condition appears to be varying levels of maintenance from field to field. Some fields show evidence of low spots, bare spots or other turf problems making play difficult, while others appear smooth, lush and green. In order to minimize adverse field conditions due to maintenance issues, we recommend that all fields be maintained to the following industry standards listed below.

The standards need to codified into a written plan to govern maintenance operations that all field maintenance personnel use and reference. The plan should be supported by sufficient labor saving equipment to allow implementation of all aspects of the plan.

Soil Testing: Perform at least once every three to five years. This allows fertilization to be tailored to each field's individual needs.

Fertilization: Fertilizers should be applied mid spring, early June, mid September, late October, and mid to late December.

Aeration: In late March to early April, after school is out in June, and in late August before Fall School sports begin. Aeration reduces hardness and compaction of soil, allowing roots to breathe and grow more easily, and making turf more resilient for falling players.

Mowing: Weekly March through October, as needed October to November. Turf maintenance professionals emphasize that mowing schedules should not be reduced when fields are resting or otherwise inactive, to ensure thick vigorous growth.

Irrigation: 1" per week.

Lime: As needed to maintain a ph of 6.0-6.7.

Seeding: Applied between mid August and mid September.

Field Lining: Before each game or as needed.

Baseball Infields: Sand and calcined clay should be worked into clay-skinned infields as required.

Pest Control: Any problems detected should be resolved using cultural practices. In practice, fields treated with pesticides to correct insect problems must be taken out of play to avoid contact with players and children, which will require extra fields to relocate game play to.

Excess Thatch Removal: Performed in June when soil is dry.

Rolling: Perform three (3) times per year when the ground is soft. This will assist to keep the turf from becoming uneven and lumpy, increasing player safety.

Appendix A

Summary of Scheduled Time Per Week Per Field Note: Times shown are for all scheduled uses, not just indicated sport.

Rev. 8 September 2003

G:\Transportation\Middleborough\Master Plan\field study report Docs\Pre\imanatysis-Revised 8SEP03\(\)Time Scheduled by field.xls\|HS - Football Prac-Track

Appendix B

Field Time Utilization - Summary

Assumed for the purposes of the calculation below:

- 1. For fields other than Soccer, the use time shall be M-F 2:30-5:00 PM or 12.5 hours or schedulable time for school restricted use period per field.
- 2. For fields other than Soccer, the use time shall be M-F 5:00-8:00 PM and Sat./Sun 8 AM-8PM or 39 hours or schedulable time
- for unrestricted use period per field. 3. For Soccer, the use period shall be Sat./Sun 8AM-8PM or 24 hours of schedulable time per field, as soccer does not play games during the week
- 4. The time scheduled for the following fields shall be reduced by the given field factor to enable comparasin of all soccer fields to a full size field.
- 5. All Time shown below is indicated as "hours per week".

Appendix C

Field Time Projection - Summary

Assumed for the purposes of the calculation below:

- 1. For fields other than Soccer, the use time shall be M-F 2:30-5:00 PM or 12.5 hours or schedulable time for school restricted use period per field.
- 2. For fields other than Soccer, the use time shall be M-F 5:00-8:00 PM and Sat./Sun 8 AM-8PM or 39 hours or schedulable time for unrestricted use period per field.
- 3. For Soccer, the use period shall be Sat./Sun 8AM-8PM or 24 hours of schedulable time per field, as soccer does not play games during the week
- 4. The time scheduled for the following fields shall be reduced by the given field factor to enable comparasin of all soccer fields to a full size field.
- 5. All Time shown below is indicated as "hours per week".
